

Frame prevalence vs global dispersion (full infant-view dataset)

DINOv3 global dispersion

Clerkin-style frame prevalence: unique frames with ≥ 1 detection of the category, divided by all unique frames in the 0.27-filtered infant-view pool (valid129 set). Not the 7,018 rater-validated crop sample.
Y and dot size: valid7018 per-crop dispersion (7,018 crops). Dot size is not frequency.
